# Tool Box Rental Application

# Project Description

This application is designed to track tool rentals to friends to reduce the number of tools lost.

# *MVP Features*

- Landing Page with Tool Bar
    - The tool bar will allow users to cycle through the categories which tools will be divided into
    - Each tab of the tool bar will pop up as a modal
- Tool box image with clickable drawers
    - Each drawer of the background tool box on the main landing page will contain buttons which will open the corresponding modal
    - The tool information will be housed in a database
- Check out cart for selected items to rent
    - Clicking a cart icon in the top right corner of all pages will take users to the cart modal
    - Items will be added to a list and will be assigned to a borrower id
- Return to home page button
    - All pages will have a return to home button on the top right corner to return to the home page

# *Coding List*

- Build HTML Layout
    - Create the main page and basic infoprmation
- Design the layout for the main page
    - Using SCSS add an all encompassing design to create a clean modern look
    - Select a font and button style
- Create backend server
    - Identify a tool api
    - If no tool api's exist begin building a basic database
- Build functionality Using Javascript
    - Create basic functionality for home page

- Add functionality to background toolbox
- Copy formatting and layout to created modals
  - Add functionality to modals
